

Integrating a Centralized Customer Feedback System for Pacific Horizon

Project Initiation & Planning

Business case

1. Title

- Project Title - Integrating a centralized customer feedback system for Pacific Horizon
- Prepared by - Darlington Nwosu
- Date - 15/09/2025
- Version - V1.0

2. Executive Summary

Problem statement

Pacific Horizons, a family-run luxury hotel group with three properties along California's Central Coast, has built a reputation for delivering highly personalized guest experiences rooted in coastal beauty and local culture. However, the company faces significant challenges in managing customer feedback. Feedback is collected through fragmented channels such as in-person conversations and public review platforms, resulting in data silos, inconsistent interpretation, delayed responses, and missed opportunities. Without a unified feedback management approach, Pacific Horizons risks compromising service quality, brand reputation, and opportunities for innovation.

Business Goals

- Strengthen Pacific Horizons' reputation as a premier luxury hospitality provider by consistently exceeding guest expectations.
- Implement a streamlined, data-driven feedback management system to drive service excellence.
- Enhance customer loyalty and retention through timely and personalized responses to feedback.
- Support sustainable growth by leveraging customer insights to refine curated experiences and introduce new offerings.

Key Objectives

- *Centralize Feedback Collection* – Integrate all feedback sources (in-person, online reviews, surveys) into a single, unified platform.
- *Standardize Insight Generation* – Apply consistent analysis frameworks across departments to ensure aligned interpretation of guest sentiment.
- *Accelerate Response and Resolution* – Reduce delays in addressing guest concerns by automating categorization, prioritization, and alerts.
- *Identify and Act on Opportunities* – Capture valuable guest suggestions systematically to drive service innovations and tailored experiences.
- *Empower Teams with Data* – Provide department-specific dashboards and training to enable proactive, data-driven decision-making.

Success Measures

- *Operational Efficiency*: 50% reduction in time taken to review and respond to feedback within the first year.
- *Service Quality*: Improvement in average guest satisfaction ratings on major review platforms by at least 10% within 12 months.
- *Consistency*: Alignment in service-related improvements across all three properties, measured through quarterly internal audits.
- *Customer Loyalty*: 15% increase in repeat bookings and referrals within two years.
- *Innovation Pipeline*: At least three new guest experiences or service enhancements introduced annually, based directly on customer feedback insights.

3. Solution Analysis

Current State

Pacific Horizons currently manages customer feedback through fragmented and largely manual processes:

- *Feedback Channels:* Information is gathered through informal conversations at reception and from public review platforms (email surveys, in-person, Social media, Online reviews)
- *Data Management:* No centralized system; feedback is siloed across channels, with limited consolidation.
- *Insights & Actions:* Departments (front office, housekeeping, food & beverage) interpret feedback independently, leading to inconsistent insights and scattered improvement efforts.
- *Timeliness:* Feedback review and response is manual, often delayed, reducing opportunities for real-time service recovery.
- *Strategic Utilization:* Valuable suggestions are often overlooked, and insights are not systematically used to inform business decisions or innovation.

Root Cause

The challenges stem from a combination of organizational and technological gaps:

- *Lack of Centralized System:* No unified platform to aggregate feedback across multiple sources.
- *Manual Processing:* Heavy reliance on manual categorization, which is time-consuming and prone to human bias.
- *Departmental Silos:* Limited collaboration and inconsistent interpretation of feedback across teams.
- *Limited Data-Driven Culture:* Staff lack tools and training to leverage customer insights for proactive decision-making.
- *Reactive Rather Than Proactive Approach:* Focus on resolving issues only after they escalate, rather than predicting and preventing them.

Gap Analysis

Current vs Desired State

Current : Feedback scattered across different platforms, delayed actions, no unified view of guest sentiment.

Desired : Unified platform for feedback aggregation, np real-time analysis and actionable insights.

4. Alternate Statement

Solution Approach

Pacific Horizons can overcome its fragmented and inconsistent feedback management process by implementing an integrated **Customer Feedback Management System (CFMS)** supported by process and cultural alignment. The approach will be multi-pronged:

1. *Technology Enablement*

- Deploy a centralized, cloud-based CFMS capable of aggregating guest feedback from in-person notes, surveys, and third-party review platforms.
- Enable automated categorization and sentiment analysis using AI tools to provide real-time insights.
- Set up role-specific dashboards and automated alerts to ensure timely action across all departments.

2. *Process Standardization*

- Develop a closed-loop feedback process to ensure every issue is acknowledged, tracked, and resolved.
- Standardize service-level agreements (SLAs) for responding to guest concerns.
- Establish quarterly review mechanisms to channel insights into actionable service improvements and innovation.

3. *Organizational Alignment & Training*

- Train front-line and back-office staff to capture feedback consistently and use the CFMS effectively.
- Foster a culture of accountability by embedding guest feedback into staff performance metrics.
- Encourage cross-department collaboration to ensure unified interpretation of insights

Feasibility Study

1. *Technical Feasibility*

- *Existing Infrastructure:* Pacific Horizons currently uses basic review monitoring and internal logs. Transition to a cloud-based CFMS is technically viable, requiring minimal on-premises investment.

- **Integration Capability:** Modern CFMS solutions can integrate seamlessly with TripAdvisor, Google, [Booking.com](https://www.booking.com), and PMS/CRM systems used in hospitality.
- **Scalability:** A solution can start with one property and scale across all three with ease.

2. *Operational Feasibility*

- **Staff Adoption:** Staff are already accustomed to handling feedback manually, so adoption of a more streamlined system is expected to be high with proper training.
- **Process Alignment:** Some cultural resistance may occur, but aligning metrics and recognition programs with guest experience goals will smooth adoption.
- **Departmental Fit:** Dashboards tailored to housekeeping, F&B, and front office will directly enhance operational efficiency.

3. *Economic Feasibility*

- **Costs:** Investment will include software licensing, integration, and training. For a boutique portfolio of three properties, this is a mid-range cost but not prohibitive.
- **ROI:**
 - Reduced guest churn and negative reviews.
 - Increased repeat bookings and upsell opportunities from improved satisfaction.
 - Innovation pipeline leading to revenue from new experiences (e.g., weddings, tours, retreats).
- **Payback Period:** Estimated 12–18 months through improved ratings, reduced issue resolution costs, and stronger brand loyalty.

4. *Strategic Feasibility*

- **Alignment with Brand:** Pacific Horizons' core identity is personalized luxury experiences; a CFMS enhances this promise by ensuring every guest voice drives improvements.
- **Competitive Advantage:** Most boutique competitors lack robust feedback systems. A formalized, data-driven approach positions Pacific Horizons as a leader in guest-centric innovation.

5. **Risk Analysis**

Key Risks

1. **Technology Adoption Risk**

- Staff may resist new systems or fail to consistently log in-person feedback.
- Mitigation: Provide comprehensive training and incentives tied to guest satisfaction metrics.

2. **Data Quality Risk**

- Poor or inconsistent data entry could undermine the accuracy of insights.
- Mitigation: Standardize input formats and enforce quality checks.

3. **Integration Risk**

- Technical difficulties in integrating third-party review platforms with the CFMS could delay rollout.
- Mitigation: Choose a solution with proven hospitality integrations and pilot test before scaling.

4. **Cost Overrun Risk**

- Implementation costs (software, training, support) may exceed initial estimates.
- Mitigation: Conduct vendor comparison, negotiate clear SLAs, and budget for contingencies.

5. **Change Management Risk**

- Organizational culture may lag behind technological improvements, reducing system effectiveness.
- Mitigation: Foster a guest-centric culture through communication, recognition, and continuous training.

Assumptions

- Guests will continue to leave feedback across multiple channels (in-person, online, surveys).
- Staff will be willing and able to adapt to new systems with adequate training and support.

Dependencies

- Success depends on third-party review platforms (TripAdvisor, Google, [Booking.com](https://www.booking.com)) allowing smooth API integration with the CFMS.

- Continuous management support and alignment are required to enforce standardized feedback practices across all three properties.

Constraints

- Budget for system implementation, training, and ongoing support is capped within annual operating expenditure.
- Project timeline must align with peak/off-peak seasons to minimize guest service disruption.

6. Recommendations

Key Capabilities

- Centralized Customer Feedback Management System (CFMS) to unify all channels.
- AI-driven sentiment analysis for faster, consistent insights.
- Department-specific dashboards with alerts to enable timely, accountable responses.

Alternate Assessment

Manual processes could be optimized (e.g., Excel tracking, periodic reviews), but these remain slow, inconsistent, and unscalable, risking guest dissatisfaction and missed opportunities.

Recommendation Rationale

Implementing a CFMS with standardized processes is the most sustainable option. It reduces silos, accelerates service recovery, and transforms guest feedback into actionable innovation. This approach aligns with Pacific Horizons’ brand promise of personalized luxury, enhances loyalty, and ensures competitiveness in the boutique hospitality market.

7. Sign - off

By signing below, the stakeholders approve the business case for the integration of a centralized customer feedback system at pacific horizons.

Name:

Role:

Signature:

Date:

Metric	Target	Measurement Method
Operational Efficiency	50% reduction in time to review and respond to guest feedback within 12 months	System logs from CFMS tracking response times and resolution cycles
Guest Satisfaction	10% increase in average ratings within 12 months	Review platform scores (TripAdvisor, Google, Booking.com) and post-stay survey results
Reputation	15% increase in repeat bookings and referrals within 2 years	PMS/CRM data on repeat guests, referral codes, and booking trends

Phase	Task	Duration	Responsible
Initiation	Define project scope, objectives, and success measures	2 weeks	Project Sponsor, GM, IT Lead
	Secure budget and executive approval	1 week	Finance, Executive Team
Planning	Select CFMS vendor and finalize contracts	3 weeks	Procurement, IT, Project Lead

	Develop project plan (timeline, roles, risk management)	2 weeks	Project Manager
Execution	Configure CFMS and integrate with review platforms (TripAdvisor, etc.)	4 weeks	Vendor, IT Team
	Train staff on data entry, dashboards, and response workflows	3 Weeks	HR, Department Managers
Testing	Conduct pilot at one property (system + feedback workflows)	3 Weeks	IT, Operations, Front Office
	Review pilot outcomes, refine processes, and resolve issues	2 Weeks	Project Manager, Vendor
Deployment	Roll out system across all three properties	4 Weeks	IT, Vendor, Department Leads
	Monitor adoption, provide support, and track KPIs for success measures	Ongoing (first 3 months)	Project Manager, All Dept Heads

Version	Date	Description	Prepared By
V1.0	15/09/2025	Initial Draft	Darlington Nwosu

Project Scope

Project Scope

In-Scope Items

- Implementation of a **Customer Feedback Management System (CFMS)** to centralize feedback from in-person, online reviews, and surveys.
- Integration of CFMS with major platforms (TripAdvisor, Google, [Booking.com](#)) and the property management system (PMS).
- Setup of **automated sentiment analysis, categorization, and tagging** of guest feedback.
- Development of **department-specific dashboards** with alerts and KPIs.
- Staff training on feedback logging, system use, and service-level response processes.
- Establishment of a **closed-loop feedback process** (capture → assign → resolve → track).
- Pilot testing at one property followed by phased rollout across all three properties.
- Change management activities including communication, workshops, and support resources.

Out-of-Scope Items

- Replacement or upgrade of existing PMS or CRM beyond necessary integrations.
- Redesign of core hotel services or facilities unrelated to feedback insights.
- Marketing or brand repositioning activities.
- Guest-facing mobile app development (outside of feedback capture features).
- Full-scale BI/analytics expansion beyond customer feedback insights.

Project Deliverables by Phase

Initiation

- Approved project charter (scope, objectives, success measures).

- Business case with budget and resource allocation.
- Stakeholder register and communication plan.

Planning

- Vendor selection report and signed contract.
- Detailed project plan (timeline, risks, dependencies).
- Training and change management strategy.

Execution

- Configured Customer Feedback Management System (CFMS).
- Integrated feedback sources (TripAdvisor, Google, [Booking.com](#), PMS).
- Departmental dashboards and reporting templates.
- Staff training sessions and user manuals.

Testing

- Pilot test results and feedback summary from one property.
- Issue log and resolution plan.
- Refined workflows for closed-loop feedback management.

Deployment

- CFMS live across all three properties.
- Final adoption and handover report.
- Post-implementation review with lessons learned.
- KPI baseline dashboard for ongoing measurement.

✓ Stakeholder Analysis and Metrics

Stakeholder Identification and Matrix

Stakeholders are individuals or groups involved in or affected by this project. The document identifies key stakeholders which are grouped into internal and external stakeholders.

Key Stakeholders Identified:

- *Internal:*
 - Eleni Karras, the founder of Pacific Horizon
 - Resort managers
 - Front-desk staff, customer service, housekeeping and food & beverage teams.
 - IT Staff
- *External:*
 - Affluent travelers, honeymooners and experiential travelers
 - Guests
 - Public review platforms (TripAdvisor , Google, Booking.com)
 - Social media platforms.

Power Interest Grid

- *High Power, High Interest (Manage Closely)*
 - Eleni Karras (Founder) - As the founder, she has ultimate authority and a vested interest in the company's reputation and success.
 - Resort Managers - They are responsible for the daily operations and will be key decision makers and users of the new system.
- *High Power , Low Interest (Keep Satisfied)*
 - This category is not explicitly mentioned but could include potential investors or corporate partners who care about the bottom line but may not be involved in the day-to-day operations.
- *Lower Power, High Interest (Keep Informed)*

- Front Desk Staff, Housekeeping, etc- They are the primary users of the system, and thier daily work is directly impacted. They need to be regularly informed and trained.
- Guests - Thier satisfaction is the project's main goal, so they need to be informed of new ways to provide feedback and see the results of thier input.
- *Lower Power, Low Interest (Monitor):*
 - Individuals who follow pacific or prospective guests.

Stakeholder	Role	Interest	Influence	Communication Plan	Grid Action	Phone No	Email
Eleni Karras (Founder)	Founder & ultimate authority	High	High	Regular executive updates (monthly), direct involvement in key milestones, progress reports	Manage Closely		
Resort Managers	Oversee daily operations , system users	High	High	Weekly meetings, dashboard access, direct input into process refinements	Manage Closely		
Potential Investors / Corporate Partners	Financial stakeholders, not operationally involved	Low	High	Quarterly performance summaries, financial outcome reporting	Keep Satisfied		
Front Desk Staff	Daily system users, frontline staff	High	Low	Hands-on training, regular feedback sessions, quick reference guides	Keep Informed		
Housekeeping / F&B Staff	Service delivery teams impacted by insights	High	Low	Training workshops, departmental briefings, role-specific dashboards	Keep Informed		
Guests	End-users of services, provide feedback	High	Low	Awareness campaigns (email, in-room materials), visible improvements based on feedback	Keep Informed		
Prospective Guests / Followers	Future customers , brand audience	Low	Low	General marketing updates, social media presence	Monitor		

▼ Requirements Elicitation

1. **Eleni Karras (Founder):**

- What long-term business goals should this system directly support?
- How do you define success for guest experience improvements at the portfolio level?

2. Resort Managers:

- What operational challenges do you face today when tracking and responding to guest feedback?
- What type of reports or insights would help you make better decisions daily?

3. Front Desk Staff:

- How do you currently capture in-person feedback, and what makes this process difficult?
- What features would make a new system easy and practical for you to use during guest interactions?

4. Housekeeping / F&B Staff:

- What kind of feedback do you need visibility on to improve your department's service?
- How should alerts or notifications be delivered so they fit into your workflow?

5. Guests:

- How would you prefer to share feedback during and after your stay?
- What would make you feel confident that your feedback is being acted upon?

Business and Functional Analysis

McKinsey 7S GAP Analysis

McKinsey 7S Element	As-Is	To-Be	GAP	How to bridge the Gap
Structure	Feedback handled manually by resort managers and department heads.	Centralized system routes feedback automatically with defined workflows	Fragmented roles and duplication of effort.	Implement CFMS with clear ownership rules; reassign managers to focus on strategic actions.
Strategy	Reactive response to guest feedback; focus on problem-solving after delay.	Proactive, data-driven approach with real-time insights and innovation pipeline.	Lack of predictive capability and missed opportunities.	Adopt strategy of “listen-act-innovate”; quarterly reviews to link feedback to offerings.
Systems	Manual collection, categorization, and reporting.	Automated collection, categorization, sentiment analysis, dashboards.	Inefficiency, delays, and inconsistent insights.	Deploy CFMS integrated with PMS and review platforms; automate workflows.
Shared Values	Strong service culture but siloed across departments.	Unified culture of accountability and guest-centric responsiveness.	Departments interpret feedback differently; inconsistent standards.	Reinforce guest-first values via training, cross-department workshops, and KPIs.
Style	Top-down with managers controlling data and reports.	Collaborative, transparent with all staff empowered by dashboards.	Limited visibility for frontline staff.	Encourage participative style; provide real-time access to staff at all levels.

Staff	Heavy reliance on managers; staff have limited involvement in feedback cycle.	All staff actively engaged in capturing and responding to feedback.	Frontline staff underutilized in current process.	Train and incentivize staff to log and act on feedback; reward responsiveness.
Skills	Staff skilled in hospitality but limited in data analysis/feedback tools.	Staff skilled in using digital tools for insights and proactive service.	Capability gap in technology use and data interpretation.	Provide CFMS training, digital literacy programs, and change management support.

Requirements Definition

Requirement Analysis

Step 1: Stakeholders & End Users Identification

• Internal Stakeholders

- Founder (Eleni Karras)
- Resort Managers
- Department Heads (Housekeeping, F&B, Guest Services)
- Front Desk & Customer Care staff

• External Stakeholders

- Guests (primary feedback providers)
- Technology vendors/implementation partners
- Investors/corporate partners

Step 2: Capture Requirements

- Gathered via stakeholder interviews, current system reviews, feedback process mapping, and competitor benchmarking.
- Pain points: fragmented feedback channels, delayed response, inconsistent insights, missed opportunities.
- Desired outcomes: real-time, centralized, actionable feedback system.

Step 3: Requirement Categorization

Functional Requirements (System Capabilities)

FR1- Collect feedback from multiple channels (booking page, TripAdvisor, Google, [Booking.com](#)).

FR2- Automatically categorize and tag feedback by topic/department.

FR3- Provide real-time dashboards with guest sentiment scores.

FR4- Suggest recommended responses/solutions.

FR5- Generate consolidated reports for management review.

Non-Functional Requirements (System Qualities)

NF1- High usability with intuitive interface.

NF2- Secure handling of guest data (GDPR/CCPA compliance).

NF3- Scalable to support additional properties.

NF4- System uptime of at least 99.9%.

NF5- Fast response time (<2 seconds for data retrieval).

Technical Requirements (Technology Needs)

T1- Cloud-based architecture with multi-property support.

T2- Integration with Property Management System (PMS).

T3- API connectivity with third-party review platforms.

T4- Role-based access control for staff.

T5- Data encryption (in-transit and at-rest).

Operational Requirements (Day-to-Day Use)

OR1- Defined workflows for feedback assignment/resolution.

OR2- Staff training for system adoption.

OR3- Customer Care team monitoring real-time alerts.

OR4- Scheduled feedback review meetings.

OR5- Vendor-provided maintenance and support.

Transitional Requirements (Change Management)

TR1- Migration of historical guest feedback into the new system.

TR2- Pilot testing at one property before full rollout.

TR3- Change management communication to staff.

TR4- Parallel run with existing process during transition.

TR5- Phased implementation across all three properties

Step 4: Prioritize Requirements (MoSCoW Method)

- **Must-Have:** Centralized feedback collection, categorization, dashboards, PMS integration, secure storage.
- **Should-Have:** Sentiment analysis, recommended responses, role-based access, scalability.
- **Could-Have:** Multi-language support, AI-driven predictive analytics, mobile app integration.
- **Won't-Have (Phase 1):** Social media listening, chatbot-based feedback capture.

Step 5: Finalize the Requirement and Sign-Off

- Requirements reviewed with Founder, Resort Managers, and Technology Partner.
- Agreement reached on **scope, priorities, and phased rollout**.
- Formal sign-off document prepared, confirming ownership and timeline.

▼ Requirement Tracability Matrix

▼ Functional Requirement Documentation

Project: Customer Feedback Management System (CFMS)

Organization: Pacific Horizons

1. Introduction

1.1 Purpose

The purpose of this document is to define the functional requirements for the Customer Feedback Management System (CFMS) at Pacific Horizons. The system will centralize guest feedback from multiple channels, streamline categorization and reporting, and enable timely, data-driven decision-making across properties.

1.2 Scope

- **In-Scope:**
 - Integration with online platforms (TripAdvisor, [Booking.com](#), Google Reviews).
 - Centralized collection, categorization, and storage of guest feedback.
 - Real-time dashboards for managers and staff.
 - Automated sentiment analysis and recommended responses.
 - Reporting and analytics for performance tracking.

- **Out-of-Scope:**

- Social media feedback integration.
- Chatbot-driven guest feedback collection.
- Advanced AI-driven predictive analytics (Phase 2).

SEE RTM for Requirements

 Requirements Tracability Matrix for Pacific Horizons.xlsx

2. System Actors

1. **Guest** – Provides feedback through external platforms or hotel's booking site.
2. **Front Desk Staff** – Reviews and acknowledges feedback, initiates resolution.
3. **Resort Managers** – Monitor dashboards, assign tasks, review reports.
4. **Department Staff (Housekeeping, F&B, etc.)** – Resolve issues assigned via system.
5. **Administrator** – Manages system configuration, integrations, and user access.

3. Use Cases

1. **UC-01: Submit Feedback** – Guest submits review through external platforms or hotel site.
2. **UC-02: Collect Feedback** – System imports feedback automatically from multiple sources.
3. **UC-03: Categorize Feedback** – Feedback auto-tagged by department/topic.
4. **UC-04: Resolve Feedback** – Assigned staff address guest concerns and log resolutions.
5. **UC-05: Generate Reports** – Managers generate reports on guest satisfaction trends.
6. **UC-06: Analyze Sentiment** – System applies sentiment analysis to feedback text.

4. Reporting Requirements

- **Operational Reports:** Daily dashboard showing unresolved vs resolved issues by department.
- **Management Reports:** Monthly guest satisfaction scores, recurring issues, resolution time.
- **Executive Reports:** Quarterly trend analysis across properties with KPIs.

5. Assumptions and Dependencies

- **Assumptions:**
 - Guests will continue to primarily use existing online platforms for feedback.
 - Staff will be trained and motivated to use the new system.
- **Dependencies:**
 - Reliable APIs from external review platforms.
 - Integration with Property Management System (PMS)

6. Acceptance Criteria

1. System captures 100% of guest feedback from connected platforms within 2 minutes.
2. 95% of feedback is correctly categorized by department/topic.
3. Dashboards refresh in real-time (<5 seconds delay).
4. 90% of staff complete training and achieve ≥80% in assessment.
5. Historical feedback migration accuracy ≥98%.
6. Pilot property adoption rate ≥90% after 4 weeks of use.

✓ Product Requirement Documentation

Product Requirements Document (PRD)

Product: Customer Feedback Management System (CFMS)

Organization: Pacific Horizons

1. Product Vision

To provide Pacific Horizons with a centralized, intelligent, and user-friendly system that captures, analyzes, and acts on guest feedback in real time. The system will improve guest satisfaction, streamline staff workflows, and maintain the brand's reputation for personalized luxury experiences.

2. Target Users / Personas

1. **Guest Persona (Emily, 34, Frequent Traveler):** Values quick responses and expects hotels to act on her reviews.
2. **Resort Manager Persona (Luis, 45):** Needs visibility into all feedback, trends, and staff responsiveness to maintain service quality.
3. **Front Desk Staff Persona (Sofia, 28):** First point of contact, wants a simple system to log and track guest concerns.
4. **Housekeeping Staff Persona (Javier, 38):** Needs clear task assignments tied to feedback without manual back-and-forth.

3. Features (Prioritized using MoSCoW)

- **Must-Have:**
 - Centralized multi-channel feedback collection.
 - Automated categorization by department/topic.
 - Real-time dashboards for staff and managers.
 - PMS integration.
- **Should-Have:**
 - Sentiment analysis of guest comments.
 - Suggested responses.
- **Could-Have:**
 - Multi-language support.
 - Predictive insights (recurring issue prediction).
- **Won't-Have (Phase 1):**
 - Social media feedback integration.
 - AI chatbots for live collection.

4. User Stories / Scenarios

Guest User Stories:

- As a guest, I want my feedback submitted on [Booking.com](https://www.booking.com) to be acknowledged quickly so I feel valued.
- As a guest, I want to see my feedback acted upon during my stay so I know my concerns matter.

Department User Stories:

- As housekeeping staff, I want to receive assigned feedback-related tasks so I can resolve them efficiently.
- As front desk staff, I want to track feedback in real time so I can provide immediate updates to guests.

Feedback Management User Stories:

- As a resort manager, I want to generate a report of all feedback trends so I can identify recurring issues.
- As an administrator, I want to configure system rules so feedback is routed automatically to the correct team.

5. Use Cases (5)

Use Case 1: Submit Feedback

- **Actors:** Guest, External Platforms
- **Preconditions:** Guest completes stay and posts review online.
- **Main Flow:** System imports review via API and stores it.
- **Alternative Flow:** API down → System retries after 30 minutes.
- **Postconditions:** Feedback stored in database.
- **Acceptance Criteria:** 100% of submitted feedback is captured within 2 minutes.

Use Case 2: Categorize Feedback

- **Actors:** CFMS System, Administrator
- **Preconditions:** Feedback imported into system.
- **Main Flow:** System auto-tags review (e.g., housekeeping, F&B).
- **Alternative Flow:** Low confidence → prompts staff for manual tagging.
- **Postconditions:** Feedback categorized and assigned.
- **Acceptance Criteria:** 95% accuracy in categorization.

Use Case 3: Resolve Feedback

- **Actors:** Staff (Housekeeping, F&B, Front Desk)
- **Preconditions:** Feedback assigned to department.
- **Main Flow:** Staff take corrective action and log resolution.
- **Alternative Flow:** Escalation to Manager if unresolved within SLA.
- **Postconditions:** Feedback status updated to “Resolved.”
- **Acceptance Criteria:** 90% of feedback resolved within SLA.

Use Case 4: Generate Reports

- **Actors:** Resort Manager
- **Preconditions:** Feedback data available in system.
- **Main Flow:** Manager selects date range, property, department.
- **Alternative Flow:** No data → system shows “No Records.”
- **Postconditions:** Report exported as PDF/Excel.
- **Acceptance Criteria:** Report generated within 30 seconds, accuracy ≥ 98%.

Use Case 5: Sentiment Analysis

- **Actors:** CFMS System, Manager
- **Preconditions:** Feedback text imported.
- **Main Flow:** System applies sentiment analysis, assigns positive/neutral/negative score.
- **Alternative Flow:** Ambiguous text → flagged for manual review.
- **Postconditions:** Sentiment data displayed in dashboard.
- **Acceptance Criteria:** ≥ 85% sentiment classification accuracy.
